CLAIMS

We claim:

- 1. An isolated polynucle tide encoding a ligand-binding receptor polypeptide, said polypeptide comprising a sequence of amino acids selected from the group consisting of:
 - (a) residues 141 to 337/of SEQ ID NO:2;
 - (b) allelic variants of (a); and
- (c) sequences that are at least 80% identical to (a) or (b).
- 2. An isolated polypeptide according to claim 1 comprising residues 141 to 337 of SEQ ID NO:2 or SEQ ID NO:4.
- 3. An isolated polynucleotide according to claim 1 wherein said polypeptide further comprises a transmembrane domain.
- 4. An isolated polynucleotide according to claim 3 wherein said transmembrane domain comprises residues 340 to 363 of SEQ ID NO:2, or an allelic variant thereof.
- 5. An isolated polynucleotide according to claim 3 wherein said polypeptide further comprises an intracellular domain.
- 6. An isolated polynucleotide according to claim 5 wherein said intracellular domain comprises residues 365 to 380 of SEQ ID ND:2, or an allelic variant thereof.
- 7. An isolated polynucleotide according to claim 1 wherein said polypeptide comprises residues 25 to 337 of SEQ ID NO:2 or SEQ ID NO:4.

- 8. An isolated polynucleotide according to claim 1 wherein said polypeptide comprises residues 1 to 380 of SEQ ID NO:2 or SEQ ID NO:4.
- 9. An isolated polynucleotide according to claim 1 which is a DNA as shown in SEQ TO NO:1 from nucleotide 49 to nucleotide 1188 or SEQ ID NO:3 from nucleotide 10 to nucleotide 1149.
- 10. An isolated polynucleotide according to claim 1 wherein said polypeptide further comprises an affinity tag.
- 11. An isolated polynucleotide according to claim 10 wherein said affinity tag is polyhistidine, protein A, glutathione S transferase, substance P, or an immunoglobulin heavy chain constant region.
- 12. An isolated polynucleotide according to claim 1 wherein said polynucleotide is DNA.
- 13. An expression vector comprising the following operably linked elements:
 - a transcript from promoter;
- a DNA segment encoding a secretory peptide and a ligand-binding redeptor polypeptide, said polypeptide comprising a sequence of amino acids selected from the group consisting of:
 - (a) residues 141 to/337 of SEQ ID NO:2;
 - (b) al/1 | lic variants of (a); and
- (c) sequences that are at least 80% identical to (a) or (b); and a transcription terminator.
- 14. An expression vector according to claim 13 wherein said polypeptide comprises residues 141 to 337 of SEQ ID NO:2 or SEQ ID NO:4.

- 15. An expression vector according to claim 13 wherein said polypeptide further comprises a transmembrane domain.
- 16. An expression vector according to claim 15 wherein said transmembrane domain comprises residues 340 to 363 of SEQ ID NO:2, or an allelic variant thereof.
- 17. An expression vector according to claim 15 wherein said polypeptide further comprises an intracellular domain.
- 18. An expression vector according to claim 17 wherein said intracellular domain comprises residues 364 to 380 of SEQ ID NO:2, or an allelic variant thereof.
- 19. An expression vector according to claim 13 wherein said polypeptide comprises residues 25 to 337 of SEQ ID NO:2 or SEQ ID NO:4.
- 20. An expression vector according to claim 13 wherein said polypeptide comprises residues 1 to 380 of SEQ ID NO:2 or SEO ID NO:4.
- 21. An expression vector comprising the following operably linked elements
 - (a) a transcription promoter;
- (b) a DNA segment encoding a secretory peptide and a chimeric polypeptide, wherein said chimeric polypeptide consists essentially of a first portion and a second portion joined by a peptide bond, said first portion consisting essentially of a ligand binding domain of a receptor polypeptide selected from the group consisting of:
 - (i) /a receptor polypeptide as shown in SEQ ID NO:2;
 - (ii/ allelic variants of SEQ ID NO:2; and

- (iii) receptor polypeptides that are at least 80% identical to (i) or (ii), and said second portion consisting essentially of an affinity tag; and
 - (c) a transcription terminator.
- 22. An expression vector according to claim 21 wherein said affinity tag is an immunoglobulin $F_{\rm C}$ polypeptide.
- 23. A cultured eukaryotic cell into which has been introduced an expression vector according to claim 13, wherein said cell expresses a receptor polypeptide encoded by the DNA segment.
- 24. A cell according to claim 23 wherein said cell further expresses a hematopoietic receptor $\beta_{\rm C}$ subunit.
- 25. A cell according to claim 23 wherein said cell is dependent upon an exogenously supplied hematopoietic growth factor for proliferation.
- 26. An isolated polypeptide comprising a segment selected from the group consisting of:
 - (a) residues/141 to 337 of SEQ ID NO:2;
 - (b) allelic variants of (a); and
 - (c) sequences that are at least 80% identical to
- (a) or (b),

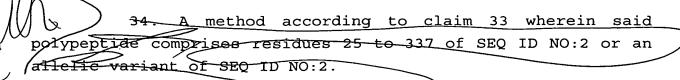

wherein said polypeptide is substantially free of transmembrane and intrace/lular domains ordinarily associated with hematopoietic receptors.

- 27. A polypeptide according to claim 26 further comprising an immunoglobulin F_C polypeptide.
- 28. A polypeptide according to claim 26 further comprising an affinity tag.

- 29. A polypeptide according to claim 28 wherein said affinity tag is polyhistidine, protein A, glutathione S transferase, substance P, or an immunoglobulin heavy chain constant region.
- 30. A polypeptide according to claim 26 that is immobilized on a solid support
- 31. A chimeric polypeptide consisting essentially of a first portion and a second portion joined by a peptide bond, said first portion consisting essentially of a ligand binding domain of a receptor polypeptide selected from the group consisting of:
 - (a) a receptor polypeptide as shown in SEQ ID NO:2;
 - (b) allelic variants of SEQ ID NO:2; and
- (c) receptor polypeptides that are at least 80% identical to (a) or (b), and said second portion consisting essentially of an affinity tag.
- 32. A polypeptide according to claim 31 wherein said affinity tag is an immunoglobulin F_C polypeptide.
- 33. A method for detecting a ligand within a test sample, comprising contacting a test sample with a polypeptide comprising a segment selected from the group consisting of:
 - (a) residues 141 to 97 of SEQ ID NO:2;
 - (b) allelic variants of (a); and
- (c) sequences that are at least 80% identical to (a) or (b),

and detecting binding of said polypeptide to ligand in the sample.

out out

- A method according to claim 33 wherein said 35. polypeptide further comprises transmembrane and intracellular domains
- A method according to claim 35 wherein said 36. polypeptide is membrane bound within a cultured cell, and said detecting step comprises measuring a biological response in said cultured cell.
- A method according to claim 36 wherein said biological response is cell proliferation or activation of transcription of a reporter gene.
- A method according to claim 33 wherein said polypeptide is immobilized on a solid support.
- 39. specifically binds that to polypeptide of claim
